

steering_simulation.main

steering_response_test.main

steering_simulation.interpolate
_joint_angles

```
graph LR; A[steering_simulation.main] --> C[steering_simulation.interpolate_joint_angles]; B[steering_response_test.main] --> C;
```

The diagram illustrates a dependency or relationship between three code components. On the left, two white rectangular boxes with black borders represent source files: 'steering_simulation.main' (top) and 'steering_response_test.main' (bottom). On the right, a gray rectangular box with a black border represents a target module: 'steering_simulation.interpolate_joint_angles'. Two blue arrows point from the right side of each source file box to the left side of the target module box, indicating that both source files depend on or interact with the target module.
